SERVICES

Outstanding availability thanks to comprehensive services

Dependable. Committed. Straightforward

To perform at the highest level, a data center must have state-of-the-art cabling products. But expert planning and installation are also of utmost importance, as is continuous maintenance. IT applications are becoming less and less fault-tolerant whereas their sophistication increases.

Transmission paths and attenuation budgets must be considered right from the start in the design of a modern data center.

Installation requires the utmost care and comprehensive know-how. In addition, the necessary resources must be available. Our skilled employees will work at your premises to ensure reliability and security in every phase of the project. Offering planning, installation, documentation and operations from a single source.

Your advantages at a glance:

- Increased reliability thanks to the commissioning of technical experts
- Relief of your technical staff: focus on core competencies
- Fast and extremely effective support in case of emergency
- Investment protection: manageable and fix costs

Rosenberger

Our services in detail
